

Botulax Botox Botulinum Toxin Injections 100iu Face Slimming Botox

Our Product Introduction

Basic Information

- Place of Origin: KOREA
- Brand Name: BOTOX
- Certification: CE
- Model Number: 100IU
- Minimum Order Quantity: 1box
- Price: bargaining
- Packaging Details: box
- Delivery Time: 5-7days
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram
- Supply Ability: 1000BOX/per box

Product Specification

- Product Name: Botox
- Usage: Injection
- Feature: Injection Powder Wrinkle Removing
- Use: Body Neck, Eye, Lips, Nose, Buttocks
- Volume: 100iu
- Model NO.: Botulinum Toxin Injections
- Quality Guarantee Period: 3 Years
- Specification: 100iu / Vial
- Highlight: **Botulax Botox Botulinum Toxin Injections, Botulax Botox face slimming botox, 100iu face slimming botox**

Product Description

Botulax Botox Botulinum Toxin Injections Powder Wrinkle Removing 100iu

Overview

Botox injections are noted primarily for the ability to reduce the appearance of facial wrinkles . They're also used to treat conditions such as cervical dystonia (neck spasms) , excessive sweating (hyperhidrosis), an overactive bladder and lazy eye . Botox injections may also help prevent chronic migraines.

Botox injections block certain chemical signals from nerves, mostly signals that cause muscles to contract . The most common use of these injections is to temporarily relax the facial muscles that cause wrinkles in the forehead and around the eyes .

Botox injections are also used to treat conditions that affect how the body functions .

mmm

Product Name	Botox Botulinum Toxin Injections
Specification	50iu 100iu 150iu 200iu
Material	Botulinum Toxin Powder
Use	Body Neck, Eye, Lips, Nose, Face
Feature	Treat wrinkles and facial creases
Skin Type	Normal All-skin
Ingredient	Botulinum Toxin
brand	Botox Botulax Medroxin Hutox Nabota
Shelf life	3 years
Quality Guarantee Period	Two Years

How does it work?

Botox is a neurotoxin. These substances target the nervous system, disrupting the nerve signaling processes that stimulate muscle contraction. This is how the drug causes temporary muscle paralysis. Botox can prevent the release of acetylcholine, which stops the muscle cells from contracting.

In order for any muscle to contract, the nerves release a chemical messenger called acetylcholine at the junction where nerve endings meet muscle cells. Acetylcholine attaches to receptors on the muscle cells and causes the cells to contract, or shorten.

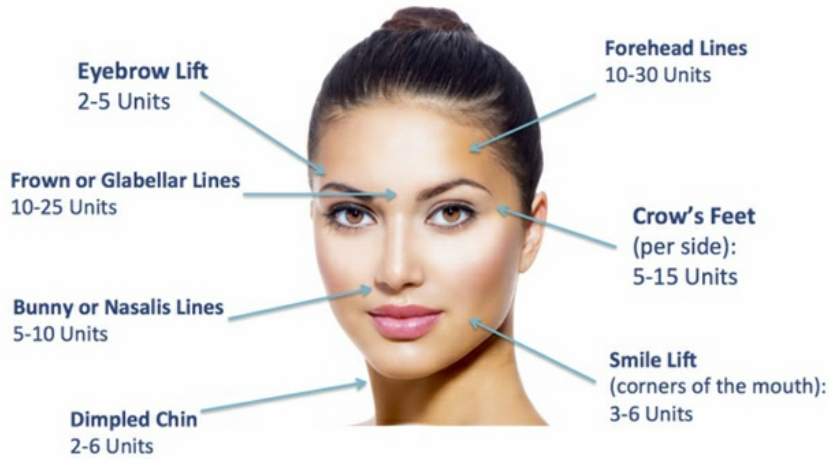

In this way, the toxin helps the muscles to become less stiff.

Procedure

1. Clinicians use Botulinum toxin by diluting the powder in saline and injecting it directly into neuromuscular tissue.
2. It takes 24–72 hours for the toxin to take effect. Rarely, it can take as long as 5 days for the full effects to show. They may last 3–12 months, depending on the treatment.
3. People should avoid using Botox during pregnancy or breastfeeding, or if they have ever had an allergic reaction to the drug or any of its ingredients.

How Much Botox Will I Need?
