Product Description

PLACENTEX Poly Deoxy Ribo Nucleotide PDRN 3ml*5vial

Placentex has anti-aging, skin-tightening, pore constriction, damage repair, deep hydration, whitening and rejuvenation functions. For canthus, neck wrinkles, and thin damaged skin and other parts of the treatment is more excellent

Placentex has been showing results for about a week.

That's because it takes a while for the body to get used to the nutrients that are being injected into the body, and then absorb them, and some people might say, well, WHEN I'm done, MY face feels round and shiny. In fact, at this time, the brightness on the face is not because of the action of the water light needle, but after the skin is punctured, physiological saline is produced between our body tissues, and then the water moon appears. In this week our face may experience redness, bruising and other situations, a week later, these possible problems will be slowly repaired by the body, can show the effect of water light needle.

Be in inject commonly 4 left and right sides, skin physiology condition can improve thoroughly. It can last about a year!

Matters needing attention:

Before injection, it is necessary to disinfect the face. It is easy to cause infection after non-sterilized water injection.

After the injection, you need to use a moisturizing mask cold compress, about 35 minutes.

After the injection, the face can not be stained with water. You can wipe it gently with salt water.

After the injection, if the skin is itchy and red, wipe it gently with salt water or wet it with gauze and replace it once every half an hour.

Diet should also pay attention to, after the injection, do not eat too spicy and stimulating food.

Promote skin regeneration

Replenishing water

Contractive pore

Repair the damage

Tyra firming

Fight decline to nourish skin

To reshape the skin like a baby's
