Product Description

dermal fillers Dermal Filler Plastic Facial Surgery dermal fillers with PLLA

What Is dermal fillers?

Facial fat loss (lipoatrophy), is an age-related condition that can result in prominent facial folds, sunken eyes, and hollow cheeks. dermal fillers® Aesthetic targets these areas to correct shallow to deep facial wrinkles and folds. The treatment is suited to nasolabial folds (smile lines) between the nose and mouth, the lines framing the mouth (marionette lines), and wrinkles in the chin. dermal fillers® is made from a biocompatible substance known as poly-L-lactic acid, a synthetic version of the substance naturally produced by the body during exercise. Because dermal fillers® is not derived from human or animal products, no skin test is required.

Product Name	dermal fillers
Material	Poly-L-Lactic Acid
Function	Wrinkles Removal Injectable dermal fillers
Grade	Injection grade

How dermal fillers works:

dermal fillers Face does more than simply "fill" face. It stimulates collagen production, which helps the skin naturally renew itself. Results develop gradually, look completely natural, and last much longer than most other injectables. This dermal filler is completely unlike any other. If you're ready to turn back the clock, this injectable treatment is worth a look.

The micro-particles of Poly-L-lactic acid in dermal fillers is mixed with sterile water and then injected. It is then deposited under the skin, after which dermal fillers breaks down and stimulates collagen production. After 2 or 3 treatments that are separated by intervals of 4 or 6 weeks, patients will notice a natural and youthful difference in their skin. The effects of dermal fillers can last for as long as 2 years.

How Can Dermal Fillers Help?

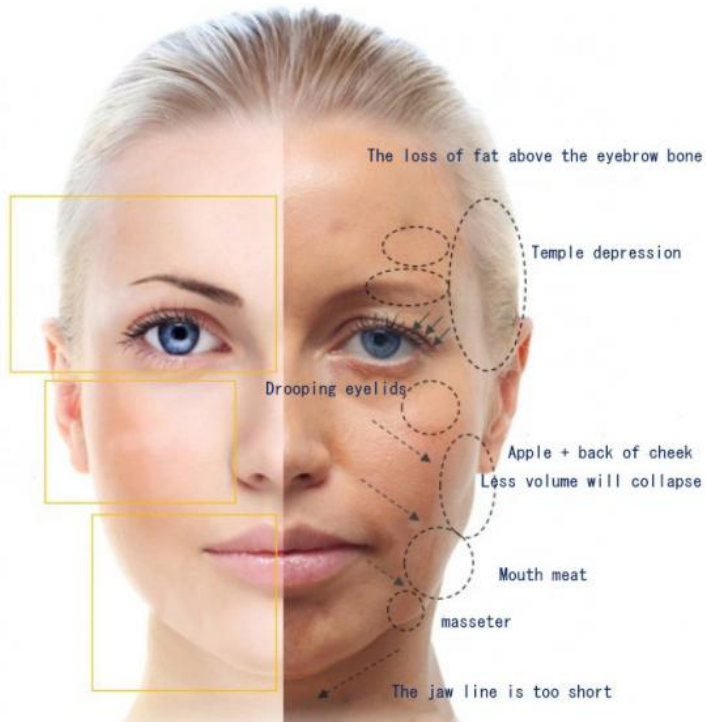

Dermal fillers work in different ways to restore volume. While dermal fillers focuses on restoring collagen levels, many other fillers rely on hyaluronic acid. Once in place, hyaluronic acid works like a sponge under the skin, collecting moisture and expanding to fill in lines, wrinkles, and parts of the face that have begun to lose contour.

Our practice offers Juvederm and , both of which are composed of hyaluronic acid. We also offer Radiesse, another dermal filler that is made up of calcium hydroxylapatite, a mineral-like compound that is found in human teeth.
