## Product Description

### Meso Gun Hyaluronic Pen Injection Machine Hyaluronic Acid Injector Hyaluron Pen Hyaluronic Acid Pen

#### What is hyaluronic pen?

Spring and piston, which allow, under pressure, quickly and evenly inject drugs under the skin through a hole with a diameter of 0.17 mm, which is two times smaller than the needle thickness for injection!

With the help of the energy of mechanical action, the spring and the special piston in the apparatus allow, under pressure, quickly but gently pushing the drug stream through a microscopic hole into the subcutaneous tissue.

Drugs are absorbed much better and faster than with the introduction of a needle, which was confirmed in a series of studies and tests conducted in different countries of the world.

The ideal solution for those prone to scarring and subcutaneous clots.

One technology that has been proven to deliver amazing results is the Derma pen Micro Skin Needling. The treatment is a form of collagen induction therapy where a series of needles penetrate the skin causing thousands of micro injuries at a vertical angle using a specialist device, for both faster and more precise needle penetration. The procedure leads to increased collagen production, which effectively repairs scars, reduces discolouration and renews tired looking skin. It is easier, safer and less painful to get maximum results.

1.Name	Derma pen
2.Object	Apparatus for applying a Micro-needle Therapy by Vibration.
3.Performanc e	A device for puncturing skin-penetrating drugs or cosmetics supports with a micro-needle guided between extended and retracted positions.
