Product Description

Medytox Innotox Liquid Injection Botulinum Toxin Type A 50iu 100iu For Wrinkle

Wrinkle Botulinum Toxin 100iu 150iu thin face Innotox hutox Nabota Botulax Botox Allergan

Innotox / INNOTOX 50 units. is an innovative drug (botulinum toxin) type A developed by the South Korean company Medytox Inc.

This drug has gained great popularity in clinics in South Korea and Japan due to several advantages:

- 1) Structure of the drug: Innotox is available in a new liquid phase, so it does not require dilution. One bottle contains a ready-made product solution for 50 units.
- 2) Composition: the improved formula of the preparation does not contain: proteins, albumin, gelatin, compared with other similar drugs.
- 3) Temperature conditions: insensitive to temperature extremes, in contrast to solid-phase preparations. However, it is recommended that you keep it in the refrigerator until use. The opened bottle can be stored in the refrigerator at a temperature of 2 to 8 degrees 72 hours.
- 4) Diffusion: has the least diffusion among all botulinum toxins currently known.

Our Product Introduction

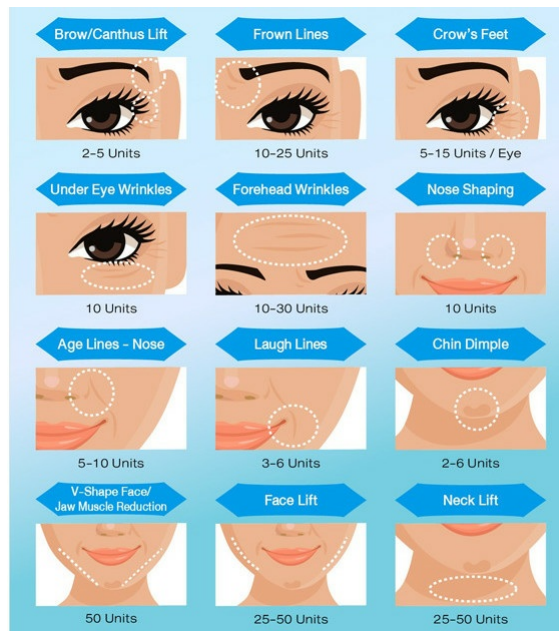

5) Effect: during the course of procedures, the effect lasts up to 8 months, in contrast to other botulinum toxins, in which the effect lasts up to 4 months.

The active components are: botulinum toxin type A, L-methionine, polysorbate 20, buffered saline phosphate pH 7.0.

How does nabota work?

nabota acts by temporarily paralyzing the muscles. Therefore, people with such muscles or nerve problems benefit from it. Let's look a bit closer at how it works. Botox is inherited from neurotoxins. They work by targeting the nervous system and disrupting the mechanisms of nerve signaling to stimulate muscle contractions. This leads to muscles becoming temporarily paralyzed.
