### Product Description

#### Plastic Facial Surgery dermal filler Plla Poly-L-Lactic Injection For Face Filler

##### What Is dermal filler

dermal filler® is made from a biocompatible substance known as poly-L-lactic acid, a synthetic version of the substance naturally produced by the body during exercise. Because dermal fillers® is not derived from human or animal products, no skin test is required.

dermal fillers is a new injectable used to fight wrinkles and sagging skin by stimulating the skin's collagen production to help restore the cheeky plumpness of healthy skin. It is an alternative anti-aging treatment to injectable dermal fillers, skin creams, fat injections and implants. Collagen is an important structural protein found in connective tissue. Its function is to keep the skin firm, youthful and smooth.

Our Product

product name	dermal filler Plla Poly-L-Lactic
package	150mg/5ml
moq	1 vial

#### What is the usual treatment protocol for dermal filler?

The number of injection sessions and the length of time between sessions vary from person to person. Older patients, thinner patients, and patients who exercise extensively may require more product or more treatment sessions.

*If you want to appear more youthful-looking  
pls choose sculptra*

## Massage step

Within 5 days after use, patients are advised to massage the treated area by themselves 5 times a day for 5 minutes each time, from bottom to top

1. Slide around your eyes to your temples

2. Place your thumb against your temple and press gently outward from the center to your temples

3. The depression under the bone is massaged repeatedly

4. The hands slide on each side of the cheekbone in a curved shape

5. Clench the fist from bottom to top massage to stretch to raise

6. Gently press your thumb under the ear, hook your hands and pull up from under the ear
