

Polidioxanona Fio De Sutura Cannula Cog Barbed Thread cog 2-1 3-1 4-1 5-1 3D 4D Lift Hilos Pdo thread lifting

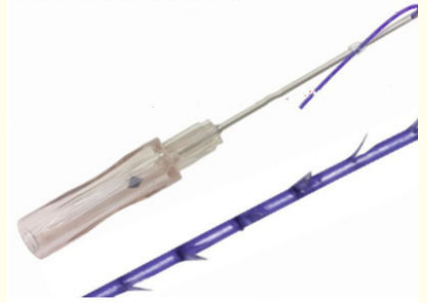

Our Product Introduction

for more products please visit us on hadermal-filler.com

Basic Information

- Place of Origin: Korea/China
- Brand Name: pdo
- Model Number: pdo-A
- Minimum Order Quantity: 10 piece
- Price: 0.5 USD/piece
- Packaging Details: box
- Delivery Time: 4-6 days
- Payment Terms: TT/Western Unio/ LC /WesternUnion/ Paypal/credit card
- Supply Ability: 100000000 bottles /days

cog 3D/4D(B/L/W)
pdo pcl plla
18G 19G 21G 23G
38mm 60mm 90mm 100mm 120mm

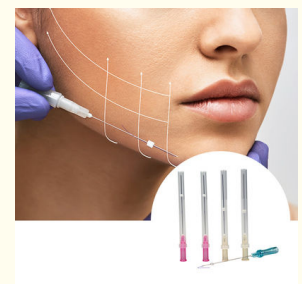

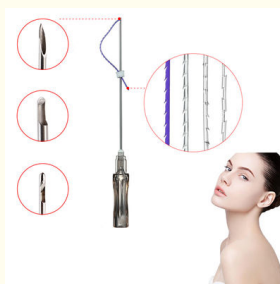

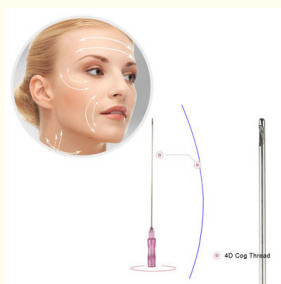

Product Specification

- Product Name: Cog Thread De Pdo Pcl Plla Thread
- Effects: Facial Wrinkles Lift
- Feature: Anti Wrinkles Remove Wrinkles
- Material: Polydioxanone
- Usage: Wrinkles Lifting
- Used For: Aesthetics Beauty Clinic Spa
- Size 2: Mono Screw Cog Fishbone Press Muti
Bouble Thread Double Needle Eye Nose
- Keywords: Korea Face Lifting Smooth Mono Wrinkles
Lift Pdo Thread
- Type: 18G 19G 21G 23G

eye thread
30G25mm
30G38mm

| type | pdo plla pcl |
| usage | facial body lift lifting |
| feature | wrinkles lifting anti wrinkles anti aging |

pdo thread

A thread lift is a procedure that uses a dissolvable suture to tighten and lift your skin. It's a less invasive procedure than facelift surgery and can often be performed in under 45 minutes without needing to go under a scalpel. Polydioxanone (PDO) thread lifts use a biodegradable polyester suture. They're best suited for rejuvenating your skin while some newer types of thread lifts are better at lifting sagging skin.

lasting time

The authors of a 2019 study Trusted Source found that a PDO thread lift caused immediate improvements in skin sagging after the procedure. However, there was a noticeable decline in results 6 months later. Improvements were no longer apparent after 1 year. In a study Trusted Source published in Aesthetic Surgery Journal, a surgeon with 16 years of thread lift experience says he has seen results last anywhere from 1 to 9 years. Younger people tend to have results that last 3 to 4 years. Older people with poor skin volume or elasticity tend to only see benefits for 1 to 2 years. PLA and PCA thread lifts tend to last longer since the sutures take longer to dissolve.

Used For?

PDO mono threads. Smooth sutures that help rejuvenate your skin by stimulating collagen production.

PDO cog threads. These threads have barbs that latch into your skin like small fishhooks, to provide support and lift parts of your face.

PDO screw threads. Made up of one or two

intertwined threads, these are used to help restore volume to sunken parts of your skin.

Usage:

A thread lift can treat most parts of your face that are experiencing signs of aging. The areas around your cheeks, jaw, neck, and eyes are among the most commonly treated areas. Because the results of thread lifts aren't as drastic as the results of facelift surgeries, thread lifts are commonly used together with other anti-aging procedures such as dermal fillers. PDO threads are one of three types of sutures commonly used in thread lift procedures. The other two types are made from polylactic acid (PLA) and polycaprolactone (PCL). PDO threads have been around the longest of the three and have been used in surgeries since the 1980s. They're made from a colorless polyester that breaks down in your body after about 6 months. The presence of these sutures in your skin triggers cells in your body called fibroblasts to produce more collagen. Collagen is the protein that gives your skin its structure and elasticity. Loss of collagen is one of the main causes of aging skin.
