Product Description

10 vials Dissolves Hyaluronic Acid Liporase Hyaluronidase for Injection Filler Remover

Liporase Hyaluronidase : dissolve dermal fillers

Liporase Hyaluronidase is made in Korea. It is used to dissolve hyaluronic acid based dermal fillers that have been placed incorrectly, excessively, or unevenly. Hyaluronidase is also used in emergency situations where dermal filler has been inadvertently injected into an artery causing occlusion of the blood supply. It is injected into the vicinity of the dermal filler that needs to be dissolved.

1 box : 10 vials

Each vial contains 1,500 I.U. of hyaluronidase to be mix with 3cc of saline.

Uses of Hyaluronidase Injection:

To remove filler, hyaluronidase can be injected to dissolve the hyaluronic acid in dermal fillers.

To increase the effect of lipodissolving injection, hyaluronidase can be added to the cocktails of fat melting injection.

Hyaluronidase is often combined with local anaesthetic to increase the diffusion of local anaesthetic.

Process of Hyaluronidase Injection for filler dissolving:

Mix 3cc of saline to 1 vial of Hyaluronidase, it could dissolve 3cc of hyaluronic acid.

Hyaluronidase is injected, along with lidocaine (and sometimes epinephrine), into the area where the filler needs to be dissolved.

Hyaluronic acid filler will start to be dissolved right away, and it will be absorbed by the body in a few hours.

Process of adding Hyaluronidase to lipodissolving injection:

Mix 5cc of saline to 1 vial of Hyaluronidase, it could be add to a 10cc lipodissolving Vline injection. If it is 30cc, add 2 vials of Hyaluronidase. Hyaluronidase is mixed with Vline injection, it is injected along with lidocaine into the fat layer evenly. Massage the area where it was treated for 15 minutes each day and 7 days in a row, apply hot packing after massage.

spec

product name	hyaluronidase
packing	10 vials in one box
weight	0.3kg
useage	dissolve dermal fillers
brand	Liporase
Volume	1500 units / vial
lead time	4-7day
