

Blunt W Molding Cog PDO Lifting Z Shape Press Cog Threads 19g 120mm

Our Product Introduction

for more products please visit us on hadermal-filler.com

Basic Information

- Place of Origin: China
- Brand Name: SJZTTK
- Certification: CE
- Model Number: Mono
- Minimum Order Quantity: 5bag
- Price: 0.5USD
- Packaging Details: Bag
- Delivery Time: 5-8days
- Payment Terms: L/C, T/T, Western Union, MoneyGram
- Supply Ability: 50000bag /month

Product Specification

- Product Name: Mono Pdo Thread
- Size: 25g 26g 27g 29g 30g
- Length: 13mm 25mm 38mm 50mm 60mm 70mm 90mm 100mm
- Materials: PDO PCL PLLA
- Packing: Aluminium Bag
- Packing Size: 20pcs/bag
- Shelf Life: 2 Years
- Duration Time: More Than 6 Months
- Highlight: Z Shape Press Cog Threads,
PDO Z Shape Press Cog Threads,
120mm PDO PCL PLLA Threads

Product Description

Blunt W Molding Cog PDO Lifting Z Shape Press Cog Threads 19g 120mm Sharp Needles MONO Threads PDO PCL PLLA Thread For Facial Wrinkles Lifting Skin

Mono:

Mono threads are smooth threads without barbs. These thread type are usually placed into the face in a mesh-like fashion for skin tightening effects by improving and stimulating collagen formation around the thread.

Mono threads are often used on neck lines, neck sagginess, forehead and under eyes. These threads are designed to be attached to an "anchoring point" under the skin. Although effective in the stimulation of collagen production and synthesis, mono threads are generally effective only for tightening of the skin but not lift.

Screw/Tornado:

Screw threads are sometimes known as Tornado threads. They are often in the form of single or double threads intertwined together around the inserting needle. These threads have a great effect on volumizing sunken areas of the skin. Naturally, the intertwining threads have a stronger effect over the singular threads and are usually used for general face-lifting.

Cog:

Cog threads are essentially mono threads, but with barbs deigned to hook to the underside of the skin. These barbs are usually either cut or molded as part of the thread and purposed as a support structure to lift sagging tissues. Unlike smooth mono threads, cog threads do not require anchoring points. In the case of cog threads, collagen formation will occur around both the threads and their barbs; making it most effective for jawline lifting and slimming.

PRODUCT CHARACTERISTICS: PLLA MONO

PLLA (poly-L-lactic acid) is an excellent biodegradable material with high biological resorbability and natural compatibility.

PLLA is harmless to the human body, it is absorbed, broken down and excreted through the metabolism.

PLLA mono-type keeps the shape for a longer time than PDO, therefore the lifting effect is retained longer compared to PDO. When introduced in grid form, the volume build-up effect remains visible longer.

100% poly-L-lactic acid (PLLA).

Long-lasting results (over 2 years).

PLLA stimulates more fibrosis and collagen than PDO.

Size	Length
25g	25mm 38mm 50mm 60mm 70mm 90mm
26g	25mm 38mm 50mm 60mm 70mm 90mm
