Particle size	0.28~0.5mm, 0.1mm-2.0mm
Duration	6~24 months, 6-18 months, 6-18months, 8~12 Months

What is injectable hyaluronic acid?

Injectable hyaluronic acid (HA) is a type of temporary dermal filler. Hyaluronic acid is found naturally through out the body, with the highest concentrations in the joints, eyes, and skin. In the skin hyaluronic acid attracts water, which allows the skin to become more hydrated. As we age, the fat, muscles, bone, and skin in our face begins to thin. This loss of volume leads to either a sunken or sagging appearance of the face, fine lines, wrinkles, folds, and thin lips. Injectable HA is used to reduce the appearance of fine lines and wrinkles, facial folds, and to create structure, framework, and volume to the face and lips. The effects of injectable hyaluronic acid are seen immediately.

Hyaluronic Acid Dermal Injection Filler

Rhinoplasty,breast and buttock augmentation

How does the treatment work?

The treatment can be done in 15 minutes but it can also take longer, depending on the area to be treated.
The professional in charge of your treatment injects the product using an ultra-thin needle under the surface of the skin. For fine lines, the product is injected at the surface of the skin. For marked wrinkles, the injection is made at a deeper level.
Please note that the injection of Juvéderm Ultra requires a medical gesture that can only be carried out by a doctor (doctor specialised in dermoesthetics, dermatologist or plastic surgeon).
