- WhatsApp: +86-18132165209
- Highlight: 100iu Botulinum Toxin Type A,
50iu Botulinum Toxin Type A

Product Description

Innotox is available in two types: 50U and 100U. While both perform similarly due to their composition, the INNOTOX 100U has a larger volume, making it a more cost-effective Botox treatment option. It is also ideally suited for larger regions or treating many locations in one session, such as the entire face.

Innotox 100U offers a more cost-effective approach to Botox treatment as it comes in a pre-mixed liquid solution. It is more convenient than conventional Botox products in a lyophilized powder form. The Innotox 100U will not need dilution, making it more stable for transport and storage. The consistency of the solution also reduces risks associated with improper dilution. It is also formulated with non-animal derived ingredients for a safer administration and likely more effective treatment results. It allows you to use more of the solution for more applications, thus enhancing the overall value of the treatment. INNOTOX 100U is primarily designed to correct deep and stubborn lines and wrinkles over the face.

Furthermore, Medytox is the first company to successfully develop Botulinum Toxin in Korea; therefore, it has set the standard for global botulinum toxin in the market. Advanced technologies are used in the production of INNOTOX and are highly commendable globally, as Medytox has secured its most significant license-out contract in Korea's pharmaceutical industry.

INNOTOX 100U corrects various flaws, evident facial wrinkles, and drooping skin. It is also the first liquid version of Botox to hit the market, which contributes to its widespread appeal. Aside from aesthetic facial wrinkle reduction, INNOTOX 100U can also treat blepharospasm in the brow and hyperhidrosis in the armpits, feet, and hands. It also has a low diffusion rate, preventing the toxin from damaging adjacent tissues near the target location.
