Product Description

Sculptra Poly-L-Lactic Acid – 2 x 5ml vials

Restore lost facial volume and smooth wrinkles with Sculptra, a collagen-stimulating treatment for a natural and long-lasting rejuvenation.

[Sculptra](#) is a unique injectable treatment designed to replenish lost collagen and restore facial volume, giving a fuller facial appearance. Made with poly-L-lactic acid (PLA), Sculptra naturally stimulates collagen production, gradually reducing lines, wrinkles, and folds for a subtle and long-lasting effect.

As a biocompatible and biodegradable material, Sculptra works by stimulating the skin's cells to produce its own collagen over time. This slow and gradual process ensures that results appear naturally, without sudden changes, giving clients a refreshed look.

Sculptra is a [dermal filler](#) which is ideal for restoring volume in the cheeks, temples, and other areas of the face that have lost volume. Sculptra offers a long-term solution for facial rejuvenation.
