Product Description

Rentox 100 Botulinum Toxin Type A

Rentox 100 is a premium botulinum toxin type A drug with unique features that has grown in popularity worldwide due to its excellent efficacy and inexpensive cost. It is a novel Premium Class medicine that contains 100 units of Botulinum Toxin type A and must be diluted with 0.9% saline.

Overview of Uses

This medicine is most commonly used to treat dynamic wrinkles on the face, such as those in the forehead and between the brows, vertical wrinkles on the lips, "puppet wrinkles" in the corners of the mouth, and "crow's feet" in the corners of the eyes. It is also effective at treating persistent facial wrinkles, hemifacial spasms, and blepharospasm. In addition, stroke patients may experience localized stiffness in their wrists and hands.

Applied Areas

Lips
Neck
Crow's feet
Nasolabial folds
Forehead

Ingredients in Rentox 100

Human serum albumin (EP) 0.5 mg
100 units of Clostridium botulinum toxin type A (in-house)
Sodium chloride (EP) 0.9 mg
There is no saline solution included.

Benefits

3D impact: Onset of visible effect by day 3, with a duration of action of 6–8 months.
Composition: Revised formula contains no foreign proteins, albumin, or gelatin.
Diffusion: Exhibits the lowest diffusion among known botulinum toxins for precise results.

Product Description

When normal saline (the diluent) is introduced, the lyophilized white powder transforms into a colorless, transparent liquid suitable for injection.

Indications for Use

Correction of facial wrinkles: Effective for dynamic wrinkles on the forehead, between the brows, around the eyes ("crow's feet"), and other facial areas.
Medical conditions: Treatment for hemifacial spasms, blepharospasm, cervical dystonia (spastic torticollis), focal spasticity in stroke patients, and paralytic strabismus.

Administration Guidelines

Avoid thermal procedures (e.g., saunas or hot baths) prior to treatment.
Refrain from medications that affect blood clotting (e.g., certain antibiotics).
Dilute the vial containing 100 units of botulinum toxin with 0.9% saline.
Inject 0.1 ml of the diluted solution using a 30 G needle into targeted muscle groups.

Recommended Treatment Guidelines

Needle Gauge: 30 G

Indication: Temporary amelioration of moderate to severe lateral canthal rhytides associated with orbicularis oculi muscle activity in adults aged 19–65 years.

Efficacy and Safety Profile

Patients typically observe results within three days after injection, with effects lasting approximately six to eight months.

Rentox's low diffusion profile supports precise targeting and minimizes side effects.

Marketed as hypoallergenic due to its lack of foreign proteins such as gelatin or albumin.

Storage Conditions

Store Rentox between 2 °C and 8 °C to maintain potency until use.
