Box content:

2 vials syringes x 5 ml Poly-L-lactic acid

dermal filler is an cosmetic filler that can be used to restore facial volume lost due to aging or illness. It contains poly-L-lactic acid (PLLA), a biocompatible synthetic substance that stimulates collagen production. It can be used to treat deep lines, creases, and folds to give a more youthful appearance.

To correct fine to deep wrinkles and ageing skin. It is suitable for correcting marionette lines

(vertical lines between the mouth and chin) and nasolabial folds (smile lines or laugh lines).

It can be used to improve volume loss in facial areas such as the jawline, cheeks, and temples

Action of dermal fillers dermal filler:

The main ingredient in dermal fillers is Poly-L-lactic acid, which stimulates the production of collagen by the skin cells in a natural way. As a result, your skin looks radiant and rejuvenated. The injectable gel is biocompatible and completely biodegradable, which makes dermal fillers safe to use, non-invasive and non-surgical option for restoring collagen losses in the skin and correcting any occurring facial depressions. dermal filler is an cosmetic filler that can be used to restore facial volume lost due to aging, a biocompatible synthetic substance that stimulates collagen production. It is suitable for correcting marionette lines (vertical lines between the mouth and chin) and nasolabial folds (smile lines or laugh lines). The main ingredient is Poly-L-lactic acid.

Treatment plan with dermal fillers:

This facial injectable by Sanofi Aventis works gradually, so a couple of consecutive treatments with the solution are required for optimum results. Normally, 3 injection treatments within a period of 4 to 6 weeks are necessary in order to achieve a more natural, youthful look. However, the number of required procedures can vary for each individual patient. You will be advised on sessions required for your personal needs by your practitioner.

ACTIVATE THE POWER OF YOUR SKIN
