Advantages

Injectable poly-L-lactic acid (PLLA) is a synthetic, biodegradable polymer device approved in the United States for use in immunocompetent patients as a single regimen of up to four treatment sessions for correction of shallow to deep nasolabial fold contour deficiencies and other facial wrinkles. Injectable PLLA is also approved for restoration and/or correction of signs of facial fat loss (lipoatrophy) in individuals with HIV.

dermal fillerss plla lactic acid

The Poly L-Lactic Acid is a biodegradable and bioactive compound that is widely used in formulating injectable dermal fillers that may be used for the correction and restoration of a number of skin damage concerns, including facial fat loss, fine lines, wrinkles, and deep facial folds. Approved by the US Food and Drug Administration, the Poly L-Lactic Acid is fast emerging as one of the most popular skin rejuvenation procedures all around the world. Dermal filler is an cosmetic filler that can be used to restore facial volume lost due to aging, a biocompatible synthetic substance that stimulates collagen production. It can be used to treat deep lines, creases, and folds to give a more youthful appearance. Correct fine to deep wrinkles and ageing skin. It is suitable for correcting marionette lines (vertical lines between the mouth and chin) and nasolabial folds (smile lines or laugh lines). It is suitable for correcting marionette lines (vertical lines between the mouth and chin) and nasolabial folds (smile lines or laugh lines).

Used For?

Dermal fillers is an injectable cosmetic filler that can be used to restore facial volume lost due to aging or illness. It contains poly-L-lactic acid (PLLA), a biocompatible synthetic substance that stimulates collagen production. It can be used to treat deep lines, creases, and folds to give a more youthful appearance.

WHO USES THIS DERMAL FILLER?

Commonly, people who are 18 to 65 years old use this cosmetic treatment. It applies to individuals who are experiencing wrinkles, facial line, and volume loss caused by ageing and facial muscle contractions. On average, a minimum of three treatment sessions are needed over a period of several months. The number of injection sessions and the length of time between sessions vary from person to person. Older patients, thinner patients, and patients who exercise extensively may require more product or more treatment sessions.

Tighten the skin

Improve fine lines

Improve relaxation
