

New Lipo Lab Vline High Safety Quick Effect Small Side Effects Rapid Shaping for Dissolve Jaw Line Fat Lipovela Lemon Bottle Aqualyx

Our Product Introduction

Basic Information

- Place of Origin: italy
- Brand Name: aqualyx
- Certification: ce
- Model Number: 10*8ml
- Minimum Order Quantity: 1
- Price: 117
- Packaging Details: 10*8ml
- Delivery Time: 3-5day
- Payment Terms: T/T, Western Union, MoneyGram
- Supply Ability: 10000 box

Product Specification

- Product Name: Aqualyx Fat Dissolving Injections
- Efficacy: Weight Loss & Slimming
- Main Component: Phosphatidylcholine
- Sodium Deoxycholate: Purity 98%
- Highlight: Lipo Lab Vline fat dissolving injections, jaw line fat dissolving injections, Lipovela Lemon Bottle fat dissolver

Product Description

Aqualyx price aqualyx fat dissolving injections ejector pins

What is Aqualyx?

Aqualyx is an injectable compound made from the deoxycholate family of acids. The product may also be called Motolese's Solution, named for the professor that introduced the drug.

The acids present in Aqualyx cause fat destruction in the body. Plastic surgeons use Aqualyx for body contouring. They may inject it into different areas of the body, such as the:

- back
- chin
- hips
- knees
- stomach
- thighs

Doctors may also use the substance to treat a condition called pseudo-gynecomastia in men. This causes extra fat tissue to grow in the chest area, giving the appearance of breasts.

When injected into the body, Aqualyx can reduce the appearance of fat to give a smoother, more contoured appearance. While a person will see changes after one treatment, they'll usually require more than one treatment session to see maximum results.

Aqualyx ingredients

Aqualyx contains the following ingredients:

- buffering chemicals
- modified compound of deoxycholic acid
- red microalgae sugars
- other sugars
- sodium chloride
- water

Aqualyx contains biocompatible and biodegradable ingredients:

| | |
|------------------------------|--|
| A polymer from | 3, 6-Anhydro-L-Galactose |
| D-Galactose | 0.5% |
| Buffer systems | 4.2% |
| Sodium salt of | (3 α , 5 α , 12 α) – 3, 12-dihydroxy-5-cholan-24-acid (7.5%) |
| Water for injection purposes | 87% |
| Sodium chloride | 0.8% |
| Product Name: | Aqualyx Fat Dissolving Injections |
| Efficacy: | Weight Loss & Slimming |
| Main Component | Phosphatidylcholine |
| Sodium Deoxycholate | Purity 98% |

We all know the common areas where cellulite resides are the:

- Thighs
- Stomach
- Buttocks
- Hips
- Knees
- Chin
- Saddle-bags
- Man Boobs

Process For Administering Aqualyx – How It Works

Individuals who long for a flawless silhouette can undergo lipotherapy or lipolysis (administration of Aqualyx) to achieve their perfectly contoured body shape. The term used to describe this procedure is known as Aqualysis or Aquaplasty. This process requires the use of special intralipotherapy needles (24G x 10cm not included), which once injected, liquify fat cells, permanently destroying them before releasing the fats into the lymphatic system.

An ultrasound device can be used to monitor the movement of Aqualyx into localized fat cells.

The whole process should take no more than an hour.

Although 2-8 treatments may be required, results are noticeable just after the first or second session. Treatments should be spaced out 4 weeks apart. More stubborn areas such as the hips and thighs may require more treatments than the chin and neck which can be treated in 1-3 sessions.

How is treatment carried out?

Only medical professionals that have received specialist training in administering Aqualyxs, should treat patients with this product. Injections are usually repeated every 3 – 4 weeks and typically 2 injections at each spot during each treatment. Anaesthetics and flexible cannulas are used to aid the injection process.
