

LIPORASE HYALURONIDASE 1500iu

Basic Information

- Place of Origin: korea
- Brand Name: LIPORASE
- Minimum Order Quantity: 1
- Price: 50 dollars
- Packaging Details: box
- Delivery Time: 1-3 days
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram
- Supply Ability: 5000 pcs/month

Product Specification

- WhatsApp: +86-18132165209
- Highlight: Liporase hyaluronidase fat dissolving injection,
Hyaluronidase 1500iu fat reducer,
Liporase injection for fat dissolution

Product Description

Liporase contains hyaluronidase, an enzyme that can easily dissolve hyaluronic acid by speeding up the rate at which it is absorbed by the body. It is often used to dissolve hyaluronic acid-containing filler injections due to unsatisfactory results such as overfilling, uneven distribution, incorrect placement, or accidental injection into the vein. It is essential to note that Liporase only targets synthetic hyaluronic acid, wherein it swiftly reverses the effects of the dermal filler without damaging the body's natural hyaluronic acid.

Liporase can also boost the effectiveness of fat dissolving injections. Liporase Hyaluronidase is also certified and approved for use by the KFDA as a dissolution agent. It also has various indications that can bring significant effects to achieve the desired outcomes such as increasing the absorption and dispersion of other injected drugs, enhancing the subcutaneous fluid administration, and improving the resorption of radiopaque agent.

Benefits of Liporase

- Swiftly remove hyaluronic acid-containing fillers in case of mishaps and unsatisfying results.
- Boosts the effects of fat dissolving injections.
- Speeds up the dissolution of hyaluronic acid and its absorption in the body.
- Due to very high enzymatic activity of Liporase, it is often used for reducing body fat.

KEY INGREDIENTS

Liporase consists of 1500IU of hyaluronidase and 13.3mg of lactose hydrate.

APPLICATION

Liporase can be applied to areas where unsatisfying results of filler injections are located, especially in the face and lips. Liporase can also be injected due to the following conditions:

- Accidental intra-arterial filler injection.
- Unevenly distributed HA-based fillers
- Overfilling of dermal fillers
- Dissolving of misplaced HA fillers
- Cellulite forming areas.
- Excess body fat
