## Rejuran Healer Hb/I/S (PN) Rejuran Acne Scar Salmon DNA Removal Anti-Aging Rejuran

### Key Components and Benefits:

- **Polynucleotides (PN):** These are DNA fragments that play a crucial role in the skin's healing process. By repairing damaged skin cells and stimulating collagen production, PNs help to improve skin quality and elasticity, thereby reducing the appearance of fine lines and wrinkles around the eyes.
- **Application Method:**
  - Rejuran I (Eye) is administered through a series of precise micro-injections, much like Rejuran Healer and Skinboosters. This method allows for targeted delivery of the polynucleotides, increasing their effectiveness in the area most prone to signs of aging.

Rejuran is an injectable "skin healer" made from salmon DNA (polynucleotides). Unlike traditional dermal fillers that add immediate volume, It repairs damaged skin cells and stimulates your body's natural collagen production to improve texture, elasticity, and hydration over time.

**How It Works**

**Cellular Repair:** Polydeoxyribonucleotide (PDRN) acts on the dermis to heal skin and reduce inflammation from the inside out.

**Volume vs. Texture:** While HA (hyaluronic acid) fillers physically fill wrinkles with a gel, Rejuran thickens the skin itself for a natural, healthy glow.

**Popular Rejuran Formulas**

**Rejuran Healer:** The classic formula for overall face rejuvenation, improving fine lines, pores, and skin barrier.

**Rejuran I:** Formulated specifically for the delicate under-eye area to minimize swelling and reduce dark circles and

creepiness. Rejuran S: A thicker, more viscous gel meant to "fill" and heal atrophic acne scars and deep indentations.
