Korean Exosome Serum for Radiant Skincare 1 Kit

Our Product Introduction

Basic Information

- Place of Origin: France
- Brand Name: Exosomes Skincare
- Certification: CE
- Model Number: 5ml + 5ml
- Minimum Order Quantity: 1 box
- Price: 85USD
- Packaging Details: box
- Delivery Time: 3-5days
- Payment Terms: T/T, Western Union, /paypal
- Supply Ability: 50000box/month

Product Specification

- Product Name: Exosomes
- How To USE: Mesotherapy Injection
- Package: 5ml Powder + 5ml Serum
- Storage Conditions: Store Between 2 And 25 Degrees
- Strength: 0.025mg/ml
- Delivery Time: 1-2 Days

Product Description

Exosome Anti-Aging Acne Removal Hair Growth Skin Repair Whiten Skin Wrinkles Remove Lyophilized Powder Serum Set

The Rising Power of Korean Exosomes in Skincare

Korean exosomes are extracellular vesicles derived from cultured stem cells or plant sources, widely studied for their ability to repair damaged skin, stimulate collagen, and reduce inflammation. Their nanoscopic size allows them to penetrate deeper layers of the skin, making them a key advancement in the field of **exosomes Korean skincare**. However, what truly sets certain formulations apart is not just origin—but how well they are absorbed, how safe they are, and how long their effects last.

How EXOBLOOM™ Exosome Work In The Skin?

EXOBLOOM™ Exosomes work by delivering powerful regenerative signals to the skin at a cellular level. These exosomes, which are tiny vesicles derived from plant cells, contain growth factors, proteins, and RNA that help stimulate healing, collagen production, and skin regeneration. When injected into the skin, EXOBLOOM™ exosomes promote cellular repair, enhance hydration, improve skin elasticity, and reduce the appearance of fine lines and wrinkles. Essentially, they support the skin's natural regenerative processes, leading to smoother, healthier, and more youthful-looking skin over time.

▪ Packaging: 1 box containing 1 sets. Each set includes: Lyophilized Powder: 180 mg per vial; Enhanced Solution: 5 ml per bottle

As we mentioned, **exosomes for hair regrowth** are isolated from Umbilical cord mesenchymal stem cells. These stem cells are broadly multipotent and have a potent mixture of several growth factors that can stimulate hair follicles to divide and start the hair cycle. A few growth factors found in them include:

Insulin-like growth factor-1
Fibrinogen beta chain
Insulin-like growth factor binding protein 5
Vinculin
Alpha-fetoprotein

These growth factors come together to trigger cellular regeneration by promoting the proliferation of dermal papilla cells. These

cells are the mother cells for the hair strands and play a pivotal role in hair regrowth. It's as if exosomes are whispering ancient secrets to the hair follicles, urging them to awaken and flourish.

In addition to stimulating the growth of dermal papilla cells, exosomes are known to regulate two crucial signaling pathways, namely the SGK3, Msx2, and Wnt pathways. These two signaling molecules are essential to keep the cells in the anagen phase of the hair cycle, resulting in the hair strands growing longer and thicker. Looking at the process from a different perspective, exosomes stimulate the signaling pathways that keep the cells in the anagen phase, so your clients can see long, strong hair.

In order to provide continuous nutrition to the rapidly dividing dermal papilla cells, there is a need for blood vessels to do the same. Here, there has also been a proven role for exosomes in angiogenesis. They have been shown to boost the formation of blood vessels in the scalp. More blood vessels mean more nutrition for the growing hair strands.
